G R O W I N G   T O G E T H E R

# SPECIALLY DEVELOPED FOR LIGHT PIGLETS

Denkavig Baby Wean has been specially developed for piglets weaned between 3-6 kilograms of live weight. In practice, Baby Wean has also proven its potency as an excellent booster to be applied to suckling piglets starting from 4 days of age. Because of the high intake, resistance to diseases is maintained and mortality risks are reduced.

For the best possible intake and results, Baby Wean should be offered as a liquid feed. The best results are attained when a high quality creep feed is offered simultaneously in a separate bowl.

# Denkavig Baby Wean

## Support to early weaned piglets and runts after weaning

For piglets weaned at a light weight or in poor condition (runts) Denkavig Baby Wean can be used after weaning as a supplementary feed to support growth performance or recovery. It is recommended to separate the piglets according to their weight and condition and house them in a clean, warm and draught free environment. Baby Wean is offered in a separate feed bowl or using the normal trough, caring for all piglets to freely access the feed for a period of 5-7 days after weaning. In case of weaker piglets the product can be fed for up to 10 days after weaning.

The piglets simultaneously should be supplied with the usual dry feed to support the transition to dry feed after weaning.

## Performance

Denkavig Baby Wean encourages a high feed intake and subsequent growth, even in case of very light piglets. Runts recover, and will keep up with the rest of the litter more easily, resulting in more homogeneous groups. Heavier and stronger piglets will have a better resistance against disease. Because of this they will also perform better in the fattening phase.

## Properties Denkavig Baby Wean

- Easily soluble in cold water
- Extraordinarily homogeneous and distinguishably stable as a liquid feed
- Excellent taste and attractive odour stimulating early, eager and rapidly increasing intake
- Very high level of dairy products and other easily digestible ingredients

## Application

Denkavig Baby Wean can be offered as a dry feed, but preferably as a liquid feed (porridge) by mixing 1 kg of feed with 1.5 kg of water. Supply Baby Wean several times daily in small quantities to make certain that the product remains fresh and to prevent overeating. Interval between feedings should be less than 8 hours.
