HIGH INTAKE AND MAXIMUM DIGESTIBILITY

DenkapiG Denkalc DenkapiG Enprolac

To guarantee a high feed intake before and directly after weaning, piglet feeds not only need to be very palatable, but also must contain highly digestible energy and protein sources. Depending on local circumstances and quality of locally used raw materials, appropriate feed ingredients are not always available for feed producers or farmers who mix their own pig feed. Denkavit supplies special dairy-based concentrates to support them in formulating high quality feeds. These concentrates supplement locally offered components to full specification piglet feeds. In this way maximum performance and reliability is within reach. The inclusion of DenkapiG dairy-based concentrates in piglet feeds largely reduces the risk for digestive upsets.

Carefully selected dairy components

Dairy products to be used in piglet feeds have to be selected on high lactose, high milk protein, low non-protein-nitrogen (NPN) and low ash level in order to attain the best conditions for growth and performance. Both weaning weight and growth after weaning are greatly influenced by the feed intake before weaning. For an optimal taste and digestibility of the feed protein, ingredients which are low in trypsin inhibition are needed. Both DenkapiG Denkalc and Enprolac meet all those important demands, eventually leading to healthier piglets, more uniform litters and less requirement of medication.

High grade fat components

DenkapiG Enprolac has been enriched with refined (vegetable) food grade oils only, providing the best possible energy source and assuring excellent palatability and taste.

Quality control

All ingredients of DenkapiG Denkalc and Enprolac are thoroughly checked by the Denkavit laboratory, because variations in quality may have a large impact on piglet performance.

Properties

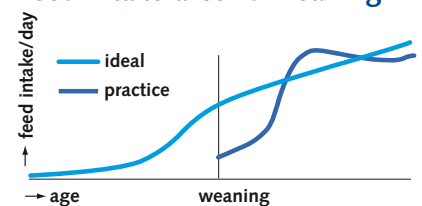

DenkapiG Denkalc

- Reliable source of protein and lactose
- Highly digestible
- Excellent taste and flavour
- High quality dairy content
- Carefully selected vegetable protein sources
- Flexible inclusion rate
- Recommended dosage:
Piglets 4-6 weeks: 10-20%
Piglets 6-9 weeks: 5-10%

DenkapiG Enprolac

- Reliable source of energy, protein and lactose
- Digestibility equals sow's milk
- Excellent taste and flavour
- Only food grade oils
- Perfectly balanced fatty acid pattern
- Low in free fatty acids
- High quality dairy products
- Flexible inclusion rate
- Recommended dosage
Piglets 1-4 weeks: 20-30%
Piglets 4-6 weeks: 10-20%
